

## Application Shifts:

- o Applications can change during lifetime of a session called an application shift.
- o example, user types [www.facebook.com](http://www.facebook.com) into web browser to access Facebook-chat.
- o Initial request goes out as HTTP request, & application is recognized as web-browsing.
- o After the HTTP request is completed, the application is changed to Facebook-base.
- o After Facebook-base application is processed, application changes to Facebook-chat.

Network traffic can shift from one application to another during a session.
